

Record360 + Decisiv Features

Bring the field into every Decisiv Case by connecting the inspection moment to the service event:

- **Inspections Attached to the Case Automatically**
 - Start any inspection connected to a Decisiv Case by picking an existing case or creating a new one from Record360. Every photo, video, and condition record flows back into the Case without a manual upload.
- **Meter Readings Where They Belong**
 - Capture hours and mileage at check-in and write them back to the Case, so every service event starts with accurate asset data.
- **A Shareable Record of What Actually Happened**
 - Every inspection generates a timestamped PDF summary attached to the Case. Ready for the fleet, the OEM, or a dispute without anyone having to build it.
- **One Workflow, No Swivel Chair**
 - Technicians and service advisors work in Record360 in the field; the Case reflects it in Decisiv. No second system to manage, no duplicate data entry, no gaps between the yard and the record.

Why Service Providers Choose Record360

- Built for the field: The simplest inspection tool your technicians will actually use on every asset, every time.
- Mobile-first, by design: Capture photos, video, and condition details from any device, in any bay, in any weather.
- Works where the work happens: In the bay, in the yard, on the lot, even when the signal drops.

Benefits of Record360 + Decisiv

- Visual proof that turns recommendations into faster approvals and upsells
- Stronger OEM program scores (Kenworth, Daimler, Volvo) through consistent check-in documentation
- Fewer disputed damage claims with timestamped visual proof
- Every Case builds the trust that sells service
